ISHIELD FOR BUSINESS

The iShield for Business is a next-generation firewall that does deep-packet inspection including application level inspection and intrusion prevention/detection by utilising intelligence from outside of the firewall.

TIERED APPROACH FOR BUSINESSES

We have a variety of hardware options available to help you manage your customers' networks. Each iteration of the iShield is equipped with the same functionality, the only differentiator being the number of users and the throughput that each unit will support before network degradation becomes prevalent.

iShield SMB

- 4x GbE Network Interfaces
- Celeron Processor
- 8GB RAM
- 200mbps Throughput
- 200 Users

iShield SMB Rack

- 6x GbE Network Interfaces
- i3 Processor
- 8GB RAM
- 200mbps Throughput
- 200 Users

iShield Pro

- 6x GbE Network Interfaces
- i5 Processor
- 16GB RAM
- 1000mbps Throughput
- 1000 Users

iShield SFP

- 6x 2.5GbE Interfaces
- 2x SFP+ Interfaces
- Intel i7
- 32GB RAM

iShield Business

- 8x GbE Network Interfaces
- i7 Processor
- 32GB RAM
- 1000mbps Throughput
- 1000+ Users

iShield Enterprise

- Custom-built
- Suited for your solution
- Designed to fit your specifications

ISHIELD FEATURES

Simplified cybersecurity

Per Device Identification
Complete asset register of all internet-connected devices

VLAN/Network Management
One device to manage your entire network

Firewall (Internal and External restrictions)
Prevent malware from spreading between networks

Safer Browsing
Protects users against malware, phishing sites and zero day attacks.

Safer Search
Enforce supported safer search for network users, cannot be bypassed.

Captive portal
Supporting guest network environments, as well as authenticated users.

Secure Remote access
To your office using a custom free DynDNS name, no static IP or third parties required.

Network Identities
Create network identities in order to control guest networks.

GeoBlocking
Block unwanted network traffic from high-risk or irrelevant countries

IP Block/VLAN based Identifiers
Manage entire network block rules

DynDNS
DynDNS names for easy remote access to the network

HTTPs and HTTP proxy
No certificate installation required

ISHIELD FEATURES

Uninterrupted operations

Automated Link Failover
Seamless failover to backup internet link

OpenVPN, WireVPN, IPSec
Secure certificate-based remote access to your network

Remote access
To your office using a custom free DynDNS name no static IP or third parties required.

Hammer Protection
DDoS protection of internal equipment from brute force attacks

Active safety
Active network scanning on a regular basis

DNS-DOH Blocking
Control DNS traffic and increase visibility by disabling DNS over TLS

VOIP Prioritisation
VOIP dequeuing, prioritisation and guaranteed bandwidth

Connection monitoring
Manage poor internet connections with built-in logging and email notification on failure

IDS and IPS
Intrusion detection and prevention systems built in

Powered by The Cloud Group

THE CLOUD GROUP PARTNER NETWORK

Our partner program is an important part of the way we support businesses.

We have a network of over 200 IT professionals that install and provide first-line support for the iShield.

We work hand in hand with them to ensure installations are seamless for their clients and new features are incorporated into the product roadmap.

Build your skills with Cloud Group's cybersecurity training courses, designed for sales teams, IT professionals, and partners at every level. From entry-level iShield training to advanced expert certifications, our flexible online courses deliver practical knowledge, recognised certification, and real-world confidence—helping you sell, deploy, and support security solutions more effectively.

Reasons to work with the Cloud Group

- **Proudly South African**
  Locally made and locally supported
- **Value for money**
  Stable and competitive Rand-based pricing
- **National footprint**
  Large reseller network extends the support across South Africa
