

 DESIGNED & BUILT IN SOUTH AFRICA

One firewall. A safer home. A more secure home office.

A next-generation firewall sized for a household or remote worker. Safer browsing for the family, and the same protection and control a company has in the office.

Built for the family, and the person working from it.

Safer browsing for kids

Safer search and policy-based filtering block unsafe content, with different rules for different family members.

See who's on your network

Every device is identified, so you know what's connected at home and who's using it.

Bandwidth where it matters

Fast, prioritised bandwidth for video calls and streaming, even when the whole household is online.

Secure VPN to the office

An always-on VPN back to head office, so a work laptop connects just as it would at the office.

Company policy, personal privacy

Company security policy is applied to work devices, without touching the family's personal devices.

No technical skills needed

A certified iShield partner installs and configures it, then manages updates remotely.

Extend the office network to every home office.

Remote staff and company directors often work from networks the business doesn't control. iShield for Home gives your IT team the same control at home that they have in the office.

01 Same visibility as the office

Your IT team sees usage and security alerts from the cloud, exactly as they would for an office firewall.

02 Always-on VPN back to head office

Work devices connect securely to company systems the moment they're switched on.

03 Company policy, enforced

Security rules are applied to work devices, while the household's personal devices are left alone.

04 Managed remotely

Your certified partner installs it once, then configures and updates it without a site visit.

05 Priced for a household

Same feature set on a smaller appliance, at a lower monthly cost than the business editions.

Protect the people with the most access.

Directors and executives hold the keys to company systems and finances. Securing their home network helps close a potential route into company systems.

How iShield compares.

Global firewall brands are priced in dollars and often sell features as separate modules. iShield brings the same business-grade protection home, with one licence and local support.

	iShield	FORTINET	SOPHOS
Pricing currency	ZAR	USD, renewals move with ZAR	USD, renewals move with ZAR
Licence model	Every feature included	Tiered bundles; features by SKU	Modules priced separately
Hardware cost	Free on 12/24-month qualifying plans	Purchased upfront	Purchased upfront
Support	South African engineers	Global support tiers	Global support tiers

Business-grade security. Sized and priced for home.

Priced per household through a certified iShield partner, at a lower monthly cost than the business editions.

Every feature. One licence.

Every security feature below is included in every iShield licence, on every model. No modules or upgrades to buy: installed on-site, managed from the cloud.

Simplified cybersecurity

Per-device identification

Maps device MAC addresses to usernames for ownership and user identification

VLAN & network management

One device to manage the entire network

Internal & external firewall

Stops malware spreading between networks

Safer browsing

Protects against malware, phishing and zero-day attacks

Safer search

Enforced safe search that can't be bypassed

Captive portal

Guest and authenticated user environments

Network identities

Identities that control guest networks

GeoBlocking

Block traffic from high-risk countries

IP block & VLAN identifiers

Network-wide block rules

DynDNS

Custom free DynDNS name, no static IP needed

HTTPS & HTTP proxy

No certificate installation required

Uninterrupted operations

Automated link failover

Seamless switch to a backup internet link

OpenVPN, WireVPN, IPsec VPN

Certificate-based remote network access

Hammer protection

DDoS and brute-force protection for internal kit

Active safety

Regular active network scanning

DNS-over-HTTPS blocking

Control DNS traffic and restore visibility

VoIP prioritisation

Dequeuing, priority and guaranteed bandwidth

Connection monitoring

Logging and email alerts on link failure

IDS & IPS

Intrusion detection and prevention built in

Enhanced productivity

Reports

Identity-based reports that surface online abuse

Automated email reporting

Top-ten reports straight to the inbox

Traffic shaping

Throttle time-wasters, prioritise work and VoIP

Policy-based URL blocking

Time-based rules and maintained blocklists

Accountability

Built-in audit logs with cloud reports

Common questions about iShield for Home.

Q1

Is iShield for Home the same product as for Business?

Yes. It has the same feature set on a smaller appliance sized for a household or a single remote worker, at a lower monthly cost.

Q2

Can it protect my kids online?

Yes. Policy-based URL filtering and safer search block unsafe content, with different rules possible for different family members.

Q3

Can my employer manage it if I work from home?

Yes. Your IT team can remotely manage security for work devices and apply company security policies, while the household's personal devices remain separate.

Q4

Do I need technical skills to run it?

No. Your certified iShield partner installs and configures it, and manages updates remotely.

Q5

Does it include a VPN for remote work?

Yes. A secure, always-on VPN back to head office gives a work laptop the same connectivity it would have in the office.

Q6

How much does it cost?

It's priced per household through a certified iShield partner, at a lower monthly cost than the business editions. Ask your partner for a quote.

Talk to your iShield partner.

iShield is installed and supported by certified IT partners across South Africa. Your partner will set up iShield at home, apply the right family and company policies, and keep it up to date remotely.
